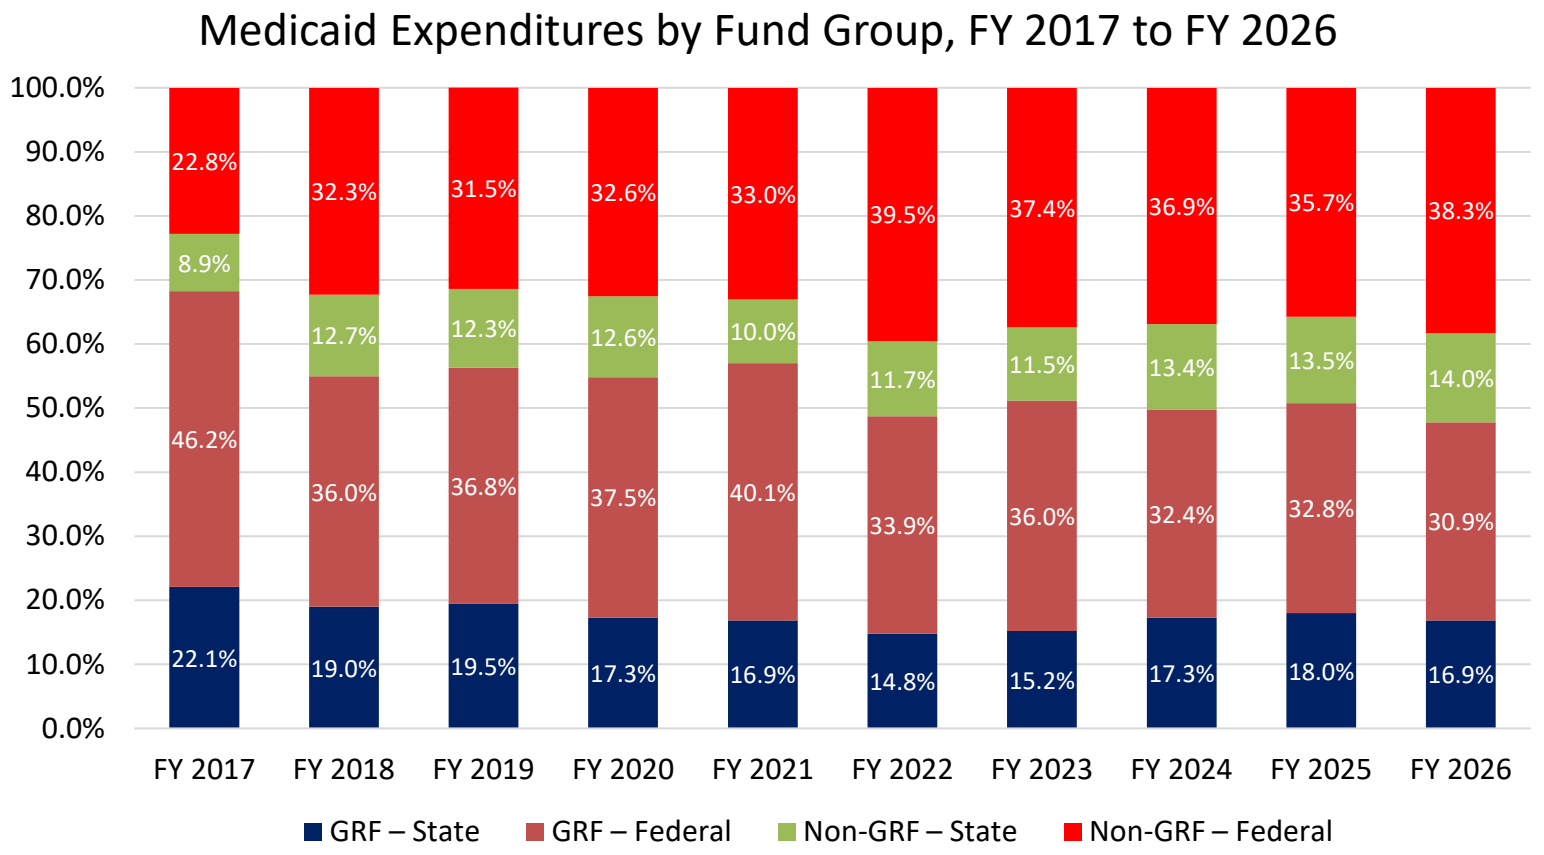
GRF's share of Medicaid spending decreases slightly in FY 2026



Source: Ohio Administrative Knowledge System

- GRF has historically been the largest source of Medicaid funds. However, in recent years the proportion of non-GRF expenditures has increased, making non-GRF and GRF expenditures roughly equal.
- FY 2026 marked a low point in this trend of decreasing GRF expenditures over the past decade, with GRF accounting for 47.8% of all funds Medicaid expenditures.
- Non-GRF – State expenditures have increased in recent years. This has been due to multiple causes, including increases in provider franchise fees and assessments and the implementation of Medicaid's single pharmacy benefit manager.
