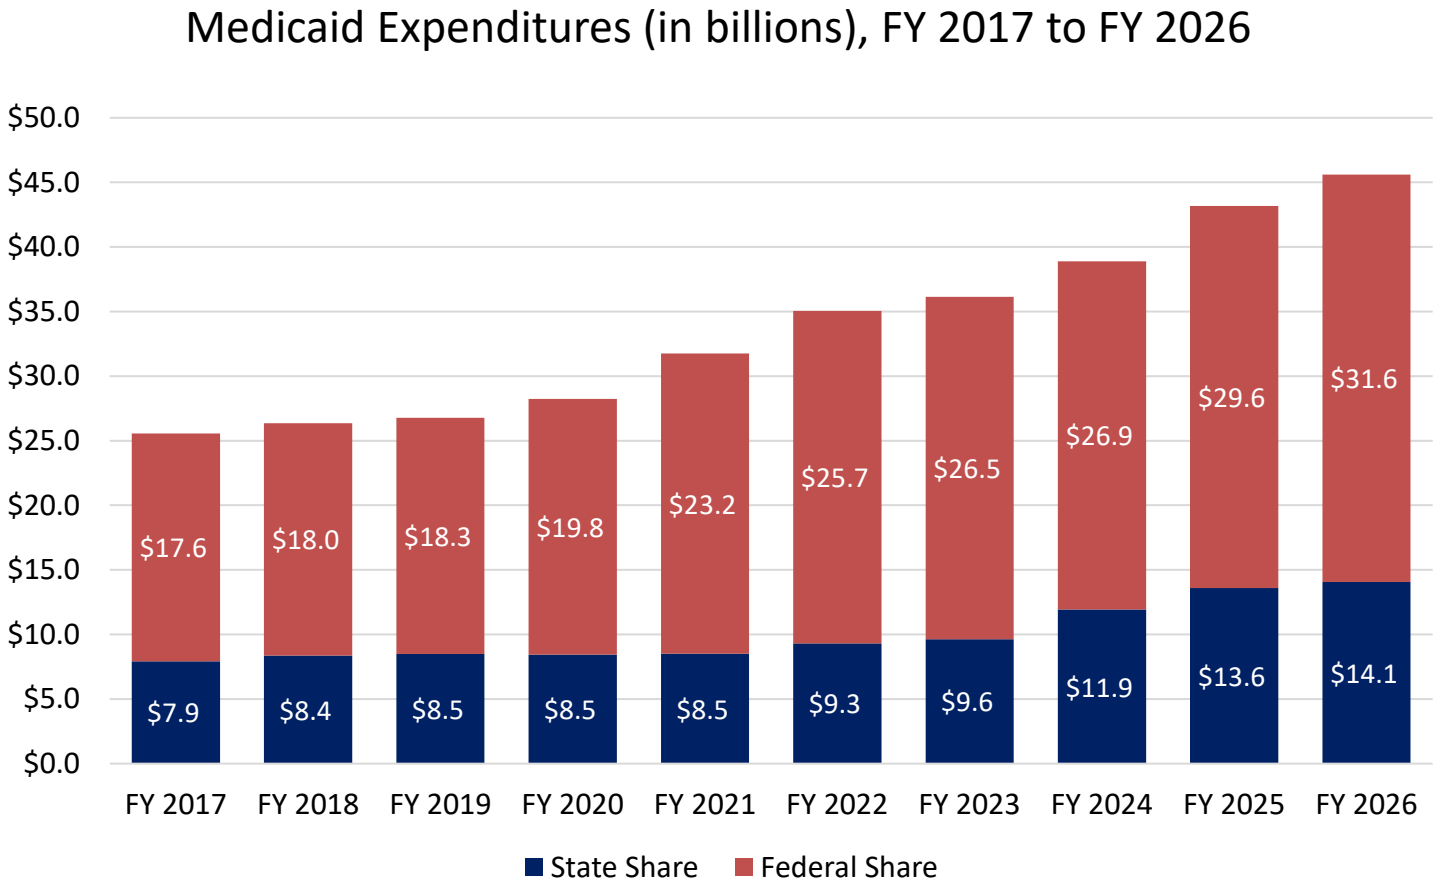
Medicaid expenditures grew by 78.5% over past decade



Source: Ohio Administrative Knowledge System

- Medicaid expenditures have increased by 78.5% over the past decade.
  - The state share increased by 77.4% over this period while the federal share increased by 79.1%.
  - Expenditures are affected by many factors, including caseloads, economic conditions, and health care prices.
- Increases in Medicaid expenditures between FY 2020 and FY 2022 were primarily due to increased caseloads during and following the COVID-19 pandemic.
  - The expenditure increases during this period were largely supported by enhanced federal reimbursement during the pandemic.
- From FY 2024 through FY 2026, increases in expenditures have been from both state and federal sources, and are attributable to many factors, including inflation and increased payment rates put into effect during FY 2024 and FY 2025.
