The Ohio Power Siting Board’s mission is to support sound energy policies that provide for the installation of energy capacity and transmission infrastructure for the benefit of Ohio citizens, promoting the state’s economic interests and protecting the environment and land use.

Chairman's message

For your review and consideration, the following pages contain the Ohio Power Siting Board's (OPSB) annual report for 2019. As you may know, the OPSB is a division within the Public Utilities Commission of Ohio. The OPSB functions as the statewide land use regulator for specific types of generation, transmission and distribution projects. As identified in Chapter 4906 of the Ohio Revised Code, it must issue a certificate before the commencement of construction of a "major utility facility" or a wind turbine generator project having a capacity of 5 megawatts or more.

In accordance with R.C. 4906.03, the 2019 annual report provides information on 2019 revenues and expenses, as well as the 2019 voting and non-voting members of the OPSB, background information, information on the statutory process that is followed to address applications for a certificate, the coding system used to distinguish between various types of certificate applications, the role of the OPSB staff in reviewing and evaluating applications for a certificate and financial information. The OPSB is funded through fees and does not obtain any revenue support from Ohio's general revenue fund (GRF).

In this year's annual report, we are also including some information and graphics that indicate the substantial shift taking place in the mix of technologies that are being used within our region and Ohio to generate electricity and the significant decline in air emissions associated with electricity production that has taken place over time.¹

Based on information provided by our regional transmission organization (PJM Interconnection LLC or PJM) we are also providing information that indicates how the electricity generation mix may continue to change going forward.

For example, while Ohio does not have some of the better solar resources in the nation, a very large number of utility scale solar projects are considering locating in Ohio.² This is in addition to the

significant number of solar projects already certificated and under construction.

Some of these current solar projects benefit financially through legislation (House Bill 6) enacted by the General Assembly in 2019 with the support of Governor DeWine and Lieutenant Governor Husted. This same legislation will work to reduce electric bills in Ohio in 2021 for customers served by investor-owned electric distribution utilities because it ends the demand-side portfolio mandates and the costs that these mandates have imposed on these customers since 2009. These electric bill reductions may be even more important now because of the economic consequences of Ohio's efforts to manage the risks of the COVID-19 virus.

As is the case in every public or private organization, the quality and timeliness of the work of the OPSB depends on the dedication and capabilities of the OPSB staff as well as that of the staff of all the agencies that are assembled under the OPSB umbrella. I believe it is fair to say that their job was done well in 2019.

But, there are challenges ahead. Beginning in July 2020 and because of the COVID-19 consequences, Ohio is taking necessary actions that will affect OPSB hiring and compensation at a time when the workload at the OPSB will be rising sharply due to the influx of new projects. The OPSB has also initiated a required process to comprehensively review its rules and make changes as may be appropriate to serve the public interest. This rule review process will be completed in 2020 after gathering stakeholder input through informal and formal means.

I hope the information in this annual report is responsive to the OPSB's reporting requirements and useful to the General Assembly, our OPSB stakeholders and the public.

Respectfully yours,

Sam

About the OPSB

About the Ohio Power Siting Board

The Ohio Power Siting Board (OPSB or Board) is comprised of 11 members. The seven voting members are: the chairman of the Public Utilities Commission of Ohio (PUCO); the directors of the Ohio Environmental Protection Agency, the Ohio Development Services Agency, and the Ohio departments of Agriculture, Health and Natural Resources; and a public member. The public member, who must be an engineer, is appointed by the governor from a list of nominees submitted by the Ohio Consumers' Counsel. The four non-voting members are legislators, two from the Ohio House of Representatives and two from the Ohio Senate. The chairman of the PUCO serves as the chairman of the OPSB. The OPSB staff is drawn from the member agencies' staff and coordinates its work with other state and federal agencies with a stake in siting activities.

Siting major utility facilities in Ohio

Before construction can begin on any major utility facility or economically significant wind farm within the state of Ohio, a certificate of environmental compatibility and public need must be obtained from the OPSB. The Ohio Revised Code defines a major utility facility as an electric generating plant with a capacity of 50 megawatts (MW) or more; an electric transmission line and associated facilities of 100 kilovolts (kV) or more; or a gas pipeline that is greater than 500 feet in length, more than nine inches in outside diameter, and designed for transporting gas at a maximum allowable operating pressure in excess of 125 pounds per square inch (psi). The statute defines an economically significant wind farm as wind turbines and associated facilities with a single interconnection to the electric grid and designed for, or capable of, operation at an aggregate capacity of 5 or more MW but less than 50 MW.

Facilities under the OPSB's jurisdiction fall into one of three application categories based upon their size, purpose and operating characteristics: certificate application, letter of notification application or construction notice application.

Certificate applications, designated by the BGN (generator) or BTX (transmission) purpose code, are processed by the OPSB using the standard application process. These projects are typically larger facilities and include economically significant wind farms and most other electric generating facilities, as well as most electric transmission lines more than 2 miles in length and most gas pipelines more than 5 miles in length.

Letter of notification (BLN) and construction notice (BNR) applications are processed by the OPSB using the accelerated application process. These projects are typically smaller in size and are most often electric transmission lines of 2 miles or less and gas pipelines of 5 miles or less.

The standard and accelerated application processes are described on the following pages.

Application Process

Standard application process

Pre-application

Before filing a standard certificate application, the applicant may request a pre-application conference. The conference serves as an opportunity for clarification of the OPSB's rules and regulations, identification of potential problems with the project and notification of possible requests for waivers or departures from the OPSB's rules.

Public informational meeting

Prior to any formal filings, the applicant is required to hold a public informational meeting. This meeting provides an opportunity for public input and concerns to be gathered by the applicant to aid in preparing an application. This meeting, along with public notice, also serves to advise affected parties of the upcoming project.

The application

After holding the public informational meeting, the application for the proposed facility is filed with the OPSB. The application must describe the anticipated impacts of the facility on the surrounding area. Applications for electric transmission lines and gas pipelines must also include information on two routes and discuss the need for the facility. While one of the routes is designated "preferred" by the applicant, both routes must be viable. The preferred designation does not indicate any favor or prior approval of the Board.

Within 60 days of application receipt, the OPSB notifies the applicant as to whether or not the application complies with the statute and applicable OPSB rules sufficiently to continue with review of the application. If it does not, the application is found to be in noncompliance until the deficiencies are corrected. When the application is determined to be in compliance, it is served on public officials in the area of the project and delivered to the local public library. Legal notices are published in local newspapers. Also during this period, interested parties have the opportunity to be recognized as interveners in the case.

Staff report

The OPSB staff reviews the application and consults with other interested state and federal agencies. A staff report containing the staff's findings and recommendations is made available prior to the start of the hearings. This staff report becomes a part of the evidence in each case, but the Board is not bound by the staff's recommendations.

Hearings

Local public and adjudicatory hearings are held by the OPSB. The hearings enable citizens, interest groups and governmental entities to present testimony. An administrative law judge, who is an attorney, presides over the hearings in the capacity of a judge. A court reporter records all proceedings and testimony. Following the hearings, the Board makes its ruling based on the case record.

Rehearing and appeals

Once the Board issues its decision, parties may file for rehearing of the decision with the Board. Following the completion of the Board's rehearing process, decisions made by the Board may be appealed to the Supreme Court of Ohio.

Application Process

Accelerated application process

Letter of notification

The applicant must publish notice of a letter of notification application in local newspapers within seven days of filing and send a letter describing the proposed facility to each affected property owner and tenant. The applicant must also notify local governments in the project area, provide them with a copy of the application and provide a copy to the local library. Hearings are not required, but requests for intervention and formal comments are accepted within 10 days of the publication of notice in the newspaper. Informal written comments are accepted by the OPSB at any time.

Letter of notification applications are automatically approved no later than 90 days after the filing date of the application, unless suspended. An applicant may request that its application be expedited to 28 days. The OPSB reviews the application and consults with and solicits comments from other interested state and federal agencies. A staff report containing the staff's findings and recommendations is made available at least seven days prior to the automatic approval date. This staff report becomes a part of the evidence in the case, but the Board is not bound by the staff's recommendations.

Construction notice

Construction notice applications are automatically approved no later than 90 days after the filing date of the application, unless suspended, and may be expedited to 21 days. The applicant must notify local governments in the project area, provide them with a copy of the application, and provide a copy to the local library. Hearings typically are not required, but written comments are accepted by the OPSB at any time. A staff report containing the staff's findings and recommendations is made available at least seven days prior to the automatic approval date. This staff report becomes a part of the evidence in the case, but the Board is not bound by the staff's recommendations.

Case Code System

Cases filed with the OPSB are identified by a four-element coding system. The coding elements are: the year in which the case was filed, the sequence in the filing, the industry code and the purpose code. The industry code indicates the utility type involved in the case and the purpose code indicates the reason for which the case has been brought before the Board. For example, an electric generating facility developer applying for a certificate would be coded as follows:

17-0000-EL-BGN

year-sequence-industry-purpose

Industry codes

EL electric

GA gas

GE general

Purpose codes

BGN application for a certificate, generating station

BGA application to amend a certificate, generating station

BSB application for a certificate, substation

BTX application for a certificate, gas or electric transmission line

BTA application to amend a certificate, gas or electric transmission line

BLN letter of notification application

BNR construction notification report

BRO rule promulgation

BIN study or investigation

BJF jurisdictional finding

Staff Reports Issued

Expenses and Receipts

The Ohio Administrative Code establishes a framework under which the OPSB charges applicants for the costs of conducting investigations and reviewing applications for major utility facilities. The expenses associated with the OPSB's analysis, processing and monitoring of applications are paid by the applicant in each case.

Standard applications

At the end of the calendar year in which a certificate is issued, the OPSB conducts a review to determine if the application filing fee was adequate. If the fee was inadequate, the OPSB invoices the applicant for the amount of the shortage, and does so annually thereafter until the project is completed. Final reconciliation, including refunds, is done in the calendar year in which the applicant notifies the OPSB that the project has been completed.

Accelerated applications

The OPSB expenses for the processing of letter of notification and construction notice applications are invoiced to the applicant at cost based upon expenses accrued in each case. An applicant requesting expedited processing of a letter of notification or construction notice must pay a fee of \$2,000 due at the time of the filing.

Please refer to the 2018 Expenses and 2018 Receipts sections of this report for a detailed accounting of OPSB expenditures and fees collected.

2019 Expenses

Case type	Case number	Name	Total expenses
Generating facility application	00-0243-EL-BGN	Robert P. Mone Peaking Plant	166.88

Pending generation interconnection requests

Ohio is part of a regional electric market served by PJM Interconnection – the regional transmission operator. The region includes 13 states and the District of Columbia where PJM is responsible for maintaining the reliability of the grid, developing transmission plans, and administering energy markets.

A generation project developer must request interconnection with PJM's transmission system by entering a calendar-based queue. PJM conducts a feasibility study and system impact study to estimate the interconnection costs and construction timeline for the generation project developer.

PJM's interconnection process places increasing financial obligations on the generation project developer who can withdraw its request to interconnect to PJM at any time. As a result, not all of the Ohio generation projects will make it to the final construction stage. However, the graph on page 38 provides an informative representation as to Ohio's pending generation interconnection requests by both fuel type and total MW. This could be indicative of future caseload before the OPSB.

Ohio - Queued Capacity (MW) by Fuel Type

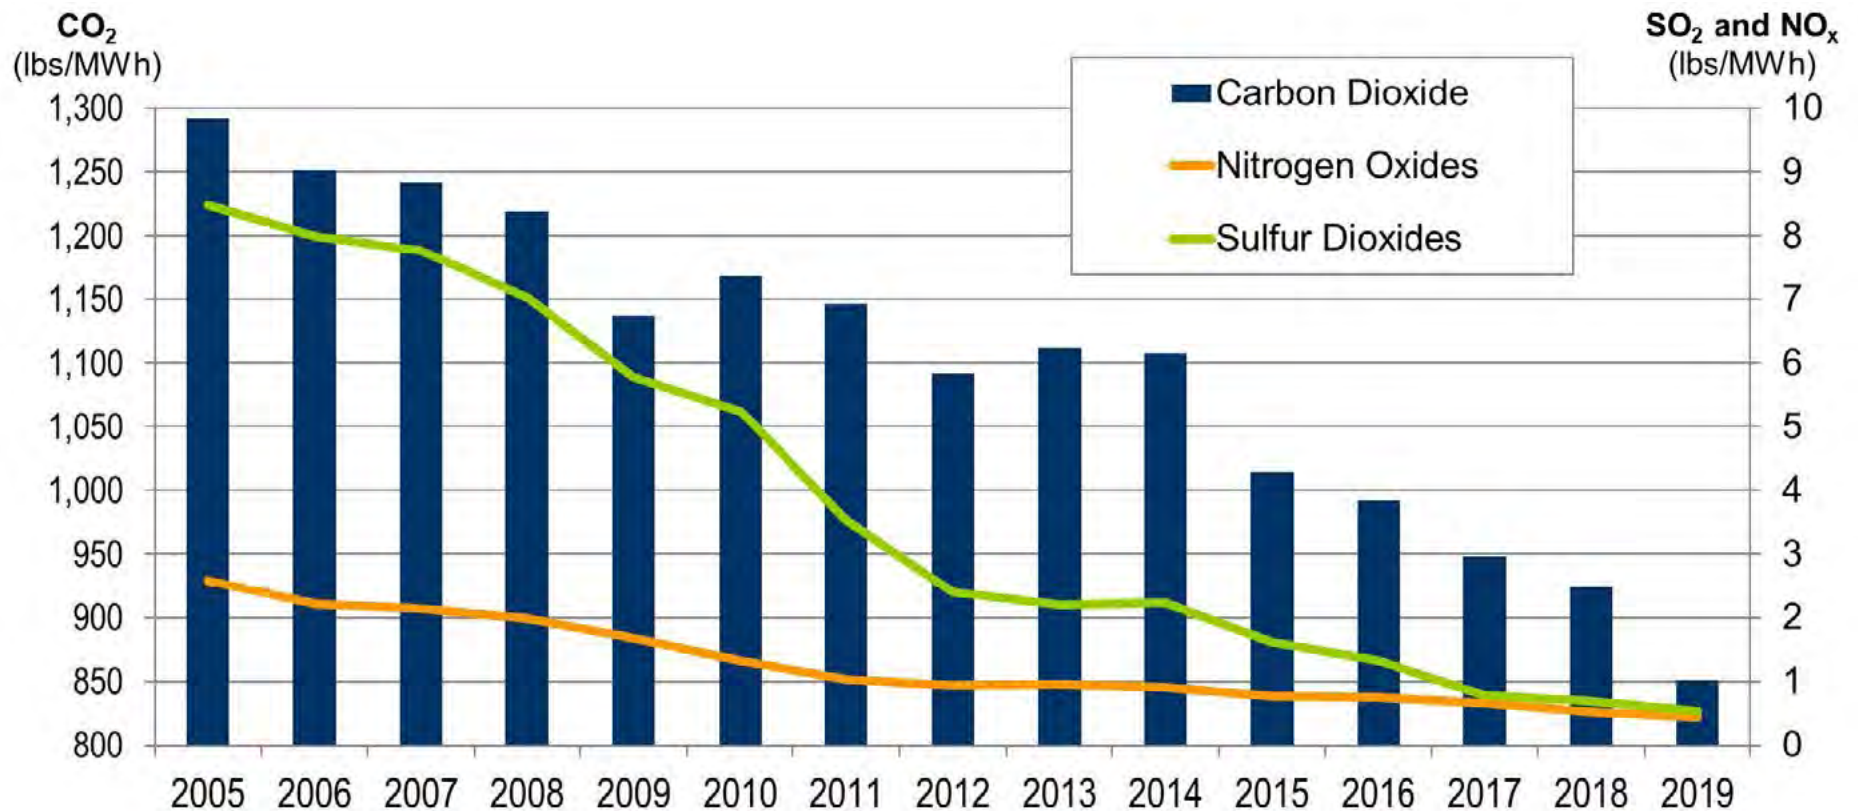

Requested CIRs - as of Dec. 31, 2019

2015 - 2019 PJM Average Emissions

This graph below demonstrates the reduction in air emissions from power plants in the PJM region. This is due, in part, to the competitive market shifting away from coal-fired power plants and towards a preference for renewable and natural gas fuel sources.
